

FACT SHEET Evidence-Based Lifestyle Change Programs

We Support the Following
Evidence-Based
Lifestyle Change
Programs:

CDSMP
Living Well with
Chronic Conditions

DSMP
Living Well with
Diabetes

DSME/T
Diabetes Self-Management
Education/Training

National DPP
National Diabetes
Prevention Program

Stepping On

Details are provided
on the next page.

Program Descriptions

Living Well with Chronic Conditions (CDSMP) *(Stanford's Chronic Disease Self-Management Program)*

The Living Well with Chronic Conditions program is an effective self-management education program for people with chronic health problems. The workshops empower participants to take an active role in managing their health by giving them the key skills needed to manage any chronic health condition. The program does not address disease specific topics. Family members and others who support people with a chronic health condition are also encouraged to attend. (www.health.utah.gov/arthritis/classes/livingwell.html)

Living Well with Diabetes (DSMP) *(Stanford's Diabetes Self-Management Program)*

The Living Well with Diabetes program curriculum is more specific to diabetes self-management and covers topics such as monitoring blood sugar, healthy eating, list of recommended testing and preventive services, how to deal with sick days, foot care, and complications. (www.health.utah.gov/arthritis/classes/dsmp.html)

Diabetes Self-Management Education/Training (DSME/T)

Diabetes education is a collaborative process that helps people with diabetes learn how to successfully manage their disease. The goal of diabetes education is to help people with diabetes practice self-care behaviors every day and be as healthy as possible. It is provided by diabetes educators. (www.choosehealth.utah.gov/your-health/lifestyle-change/dsme.php)

National Diabetes Prevention Program (National DPP)

The CDC-led National Diabetes Prevention Program (National DPP) is an evidence-based lifestyle change program for preventing type 2 diabetes. The year-long program helps participants make real lifestyle changes such as eating healthier, including physical activity into their daily lives, and improving problem-solving and coping skills. Participants meet with a trained lifestyle coach and a small group of people who are making lifestyle changes. (www.choosehealth.utah.gov/your-health/lifestyle-change/diabetes-prevention-program.php)

Stepping On

Stepping On is a multifaceted falls-prevention program for the community-residing elderly. About 30% of older people who fall lose their self-confidence and start to go out less often. Inactivity leads to social isolation and loss of muscle strength and balance, increasing the risk of falling. Stepping On aims to break that cycle, engaging people in a range of relevant fall preventive strategies. Stepping On content draws on current evidence for falls prevention. The program has been proven to reduce falls by 31%. (www.health.utah.gov/vipp/older-adults/falls/)
